

## **Mohamed Omar**

### **NQT Science**

Mohamed graduated in 2017 with an Honours degree in Psychology. In his degree, he found himself focusing on the biological aspects of our nature, widely debating evolutionary theories, getting involved in neurological studies and diving into our nervous system. As well as picking up a lot of research skills along the way, he also built a solid grounding in the fundamentals of education.

Following from there, Mohamed volunteered as a mentor in an East London school helping disadvantaged pupils improve in the following areas; achievement, attendance and behaviour. Although daunting at first, he grew to enjoy the experience and continued on in education as a teaching assistant at another school.

He has completed a PGCE Science course specialising in Biology. He believes that learning in a Science classroom is unique and looks forward to teaching LDE UTC students about the wonders of the universe. To Mohamed, there is no other subject that teaches more about the world you live in than Science.
